SUMMARY

Backend software engineer with 3+ years building and scaling Java services for a restaurant back-office SaaS platform. Focused on third-party point-of-sale and financial-system integrations, event-driven AWS workflows, and migrating monolithic systems to microservices.

SKILLS

Languages: Java, SQL
Frameworks: Spring Boot
Cloud (AWS): SQS, SNS, S3, EC2, ECS, Lambda, CloudWatch
Databases: MySQL
Architecture and APIs: Microservices, Event-driven design, REST APIs
Tools: Git, Bitbucket, Docker
AI-assisted development: Claude Code, Gemini, Junie

EXPERIENCE

Software Engineer, SynergySuite — Podgorica, Montenegro January 2023 – September 2026

- Built integrations with third-party point-of-sale (POS) and financial systems including CBS NorthStar, Toast, and Qu to synchronize sales, inventory, transaction, and employee-management data for enterprise restaurant clients
- Developed and maintained backend Java and Spring Boot services powering a restaurant back-office platform that unifies POS and financial-operations data
- Designed asynchronous, event-driven workflows using AWS SQS and SNS, along with scheduled and batch jobs, to process high-volume POS data reliably
- Migrated legacy monolithic code to a microservice architecture, improving deployability, fault isolation, and maintainability of core services
- Diagnosed and resolved production incidents across AWS-hosted services, using CloudWatch metrics and logs to identify root causes and restore service
- Deployed and operated containerized services with Docker on AWS ECS, Lambda, and S3

Technologies: Java, Spring Boot, AWS (SQS, SNS, S3, EC2, ECS, Lambda, CloudWatch), MySQL, Docker, Git, Bitbucket, REST APIs

EDUCATION

University of Montenegro 2021
B.Sc. in Computer Software Engineering — Podgorica, Montenegro
