SKILLS

- Java
- Spring Boot
- Microservices
- AWS (SQS, SNS, ECS, S3)
- Event-Driven Architecture
- REST APIs
- System Integration
- MySQL
- Git

LANGUAGES

Montenegrin	Native
English	C1

SUMMARY

Backend engineer with nearly 4 years building Java services in production for a multi-tenant restaurant back-office SaaS — **4,000+ active POS sites, ~900,000 checks a day**. Specializes in POS and financial-system integrations: built the CBS NorthStar integration end to end and has worked across 15 more, including Toast and Qu. Designs event-driven AWS workflows on SQS and SNS, and moved POS processing out of the monolith into a standalone microservice, cutting processing time by 20%, as part of a wider decomposition effort.

EXPERIENCE

Software Engineer

JAN 2023 — PRESENT

SynergySuite · Podgorica, Montenegro

- **Built and own the CBS NorthStar POS integration end to end**, delivered in ~2 months and now in rollout — menu and inventory sync from the POS, employee records written back out to it, and sales ingestion covering POS reads, checks, sales lines and payments.
- Worked across **15 further POS integrations** including Toast and Qu, shipping features and defect fixes against vendor APIs differing in auth scheme, data model and delivery method.
- Developed and maintained backend Java and Spring Boot services on AWS for a multi-tenant restaurant back-office platform — **4,000+ active POS sites, ~900,000 checks processed a day**.
- Designed asynchronous, event-driven workflows on **AWS SQS and SNS**, with scheduled and batch jobs, to process high-volume POS data reliably.
- **Moved POS processing out of the monolith into a standalone microservice**, cutting processing time by 20% and improving deployability and fault isolation; contributed to further extractions as the platform decomposed.
- Shipped features and defect fixes in financial reporting: the POS sales and payments feeding **every outlet's daily summary**, and cashsheet generation for the **~1,000 locations** with the setting enabled.
- Investigated and resolved production defects across AWS-hosted services, using CloudWatch metrics and logs to trace root causes.

Technologies: Java, Spring Boot, AWS (SQS, SNS, ECS, S3, CloudWatch), MySQL, REST APIs, Git

EDUCATION

M.Sc. studies, Computer Software Engineering
University of Montenegro, Podgorica · 2021 – 2023 · coursework completed, thesis pending

B.Sc. in Computer Software Engineering
University of Montenegro, Podgorica · 2021
